

AIRMOVER

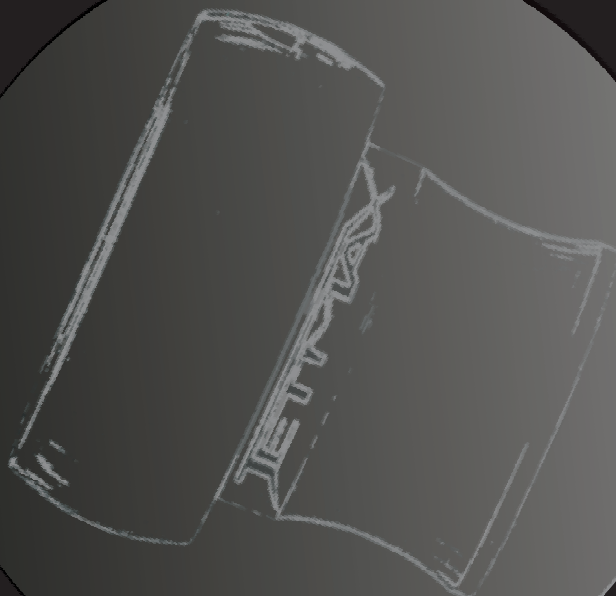

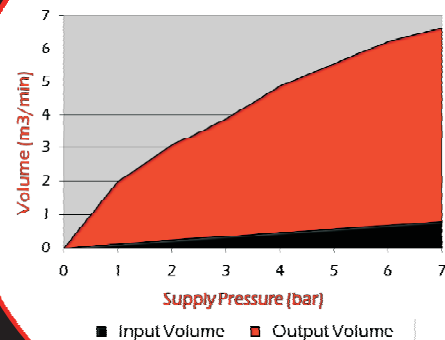

What is a Jetmax Airmover?

Jetmax Airmovers (air amplifiers) use a small volume of compressed air to induce a large volume of ambient airflow.

Jetmax Airmovers have the following features:

- 1.They have no moving parts, ensuring their safety.
- 2.Their output is varied by adjusting the supply pressure.
- 3.With the correct filter they do not require maintenance.
4. They can be stopped & started instantly by closing & opening the compressed air supply

Jetmax Performance Chart

- Low cost
- Easy to control flow/force
- Instant on/off
- No blades
- No maintenance, no moving parts
- No electricity or explosion hazard
- Ventilation & exhaust of smoke/fumes replacing fans
- Blow-off chips, trim scrap, water , dust
- Cooling molded parts & castings
- Cleaning/cooling of conveyed parts
